DiaCare

Small steps. Better health.

Your Diabetes Screening Report

Lower Risk

Based on the information you entered, our machine-learning model identified a lower likelihood of diabetes. This is only a model-generated screening result. A lower result does not rule out diabetes.

How this result was created

DiaCare's machine-learning model analyzed the values you entered and generated this result. It is an estimate from the model, not a confirmed medical diagnosis. The model may make mistakes.

Patient Information

Your details included in this screening report

Full Name: **Gaurav Kumbhar**	Mobile Number: **9373909635**
Age: **32 years**	Gender: **Male**
City: **jalgaon**	

Screening Values

The information used by the ML model

Pregnancies: **0**	Glucose: **23.0 mg/dL**
Blood Pressure: **134.0 mmHg**	Skin Thickness: **56.0 mm**
Insulin: **150.0 µU/mL**	BMI: **45.0**
Family History Score (DPF): **1.0**	Age: **32.0 years**

Friendly Health Reminders

A few everyday habits can support your general wellbeing.

- Choose balanced meals with vegetables and fiber-rich foods.
- Stay physically active in a way that feels suitable for you.
- Ask a healthcare professional about appropriate diabetes testing.
- Do not start, stop, or change medication based on this model result.

If you have symptoms or health concerns, please consult a qualified healthcare professional—even if the model shows a lower likelihood.

DiaCare is an experimental educational machine-learning project. It has not been clinically validated and should not be used to diagnose, treat, or make medical decisions about diabetes.
